

The 8511-07 module is an option to the standard 8511 module and is different in only two ways from it.

1. The range of the output advances has been increased from $\pm 99.9\text{ms}$ to $\pm 499.9\text{ms}$.
2. The internal tachometer response time, which both the advance and the motion detect functions are based on, has been increased from 24ms to 120ms.

All of the 8511-07 modules remaining functions are the same as the standard 8511 module.
