

OPTION J 0.1 RPM TACHOMETER

Page 1 of 1

DESCRIPTION OF OPTION:

This option displays the tachometer to tenths of a RPM [0.1 RPM resolution] instead of the normal resolution of a single RPM. However, this added accuracy decreases the maximum speed of the system from approx. 2500 RPM to 200 RPM. If the speed of the controlled machine exceeds 200 RPM, the iPLC controller will display erroneous values in the Tachometer display.

PROGRAMMING ADDITIONS AND CHANGES:

There are no programming additions or changes with this option.

HARDWARE CONNECTIONS:

There are no additional Hardware Connections needed with this option.

MODEL NUMBER AND CHECKSUM:

PRESS	DISPLAY	COMMENTS
[PROGRAM]	"PROGRAM x"	x = Number of running program.
[NEXT]	"IPLC1-J- 2"	Model and Revision Number.
[NEXT]	"EPROM 434E"	Checksum of Software.
